

SMART ATTENDANCE REPORT

Excel Project Summary & Explanation

Project Overview

- This project is an automated Smart Attendance Report built in Excel.
- It helps track student attendance weekly and overall.
- Features include:
 - Weekly Attendance %
 - Student-wise Summary
 - Automatic Calculations using COUNTIFS & IF formulas
 - Status (Present/Absent)

Input Sheet

- The Input sheet contains raw attendance data:
- Columns: Date, Student Name, Attendance (P/A)
- Used as source for all calculations.
- COUNTIFS formula checks presence for each student per week.
- Example: `=COUNTIFS(Input!$B:$B, "Rahul", Input!$C:$C, "P")`

Weekly Attendance Report

- Weekly Report shows attendance percentage for each student.
- Formula used:
 - =IF(COUNTIFS(...)=0, NA(), Present/Total)
 - Displays attendance % by week
 - Helps identify low attendance trends quickly.

Summary Sheet

- The Summary sheet gives a complete picture:
- Total Days counted
- Presents calculated using COUNTIFS
- Attendance % = Presents / Total Days*100
- Status column shows 'Eligible' if attendance $\geq 75\%$

Key Formulas Used

- 1. COUNTIFS → Count presence per student per condition
 - Example: =COUNTIFS(Input!\$B:\$B, B5, Input!\$C:\$C, "P")
- 2. IF + COUNTIFS → Calculate attendance % safely
 - Example: =IF(COUNTIFS(...)=0, NA(), Present/Total)
- 3. Percentage & Status →
 - Attendance % = Presents / Total Days*100
 - Status = IF(Attendance%>=75%, "Eligible", "Not Eligible")

Final Insights

- ✓ Automated system – no manual calculations
- ✓ Weekly + Student Summary provided
- ✓ Easy to identify students with $< 75\%$ attendance
- ✓ Helps in decision-making for eligibility
- ✓ Can be extended for larger classes or multiple subjects
